LEARNING DIARY

Software Development Skills, Mobile Lobby

06.10.2026

Today I started the UniBudget Finland project in Android Studio using Java. I created the project structure, initialized a Git repository, and learned how Android activities and XML layouts work together. I also designed the main user interface for the application.

07.10.2026

I implemented the Add Transaction screen. Users can add income and expense transactions with categories and amounts. During development, I faced issues with button click listeners and data validation. I solved these problems by checking Android documentation and testing the application repeatedly.

08.10.2026

I developed the Transaction History page. I learned how to share data between activities using a shared transaction list. Initially, transactions were not appearing correctly in the history screen, but after debugging the code I fixed the issue.

09.10.2026

I implemented automatic calculations for total income, total expenses, and balance on the Home Screen. I learned how to parse transaction data and update TextViews dynamically. I tested the application using my Samsung S25 device through USB debugging.

10.10.2026

I finalized the project structure and updated the GitHub repository. I created the README file, Learning Diary, and Video Link file. I reviewed the application and verified that users can:

- Add income transactions
- Add expense transactions
- View transaction history
- View total income
- View total expenses
- View current balance

Problems Faced

- Android device not appearing in Android Studio.
- Transaction history initially not displaying correctly.
- Home screen totals remaining at €0 after adding transactions.
- GitHub repository setup and first push configuration.

Solutions

Enabled Developer Options and USB Debugging on my Samsung S25.

Corrected transaction list handling between activities.

Implemented a method to recalculate totals whenever the Home Screen loads.

Connected the local Git repository to GitHub and pushed all project files successfully.

Reflection

This project helped me understand Android application development using Java and Android Studio. I learned how activities communicate, how user interfaces are created with XML, how debugging works, and how GitHub is used for version control. The most valuable lesson was learning how to solve problems through testing and debugging.

Overall, I improved both my Android development skills and my confidence in software development.

LEARNING DIARY

EXAMPLE STYLE 1

10.9.2018

I checked the general information and understood the main focus of the course, which is to find my passion as a software developer and create a unique project to represent my skills. I chose frontend module because it was the most interesting project offered. I've also tried to set up my environment, but I could not decide which code editor I would like to use. I learned to set up a git repository and did my first commit, everything went smoothly after I clicked the banner to watch intro to GIT.

11.9.2018

I have chosen VS Code as my code editor for this course, I learned how to set up addons by googling how to do it. I searched the web for best addons and chose the best addons that I think fits me best. I started to watch the first part of the example project to understand the technologies better.

I did my second commit but somehow it did not go as I planned. I went to stackoverflow and found quite many threads about version control problems. I was able to figure out what was the problem and continued to watch the first part till the end.

EXAMPLE STYLE 2

10.9.2018

I learned about,

version control, but mostly it was just refreshing my memory. What I learned was...

how to develop as a becoming software professional. I find <something> interesting, because...

how to set up Atom environment with addons. There was one problem that took me a lot of time to solve. The problem was about ...

Etc.

EXAMPLE STYLE 3

Freeform.

Something else, but reasonable. You must document what you have done, learned and when this have happened.
